

## VACUUM TAIL REMOVAL SYSTEM (VTR)

**DECREASE YOUR SCHEDULED MAINTENANCE** with the Vacuum Tail Removal System option, exclusively from Felins. This specially designed 2000 series option will help you reduce your regular maintenance time by eliminating the daily machine cleanout from your schedule. Available for all machine sizes, you can let the VTR system do the daily cleanup for you. The VTR system also significantly reduces the possibility of costly repairs by keeping the tying area free from waste buildup.

Take advantage of this latest innovation by adding the VTR system to your next Pak-Tyer 2000 order.

**UPGRADE** - The VTR upgrade kit includes everything you need to update your existing Pak-Tyer.

This maintenance upgrade will eliminate the need for emptying the cut-offs tray or cleaning out of the mainframe tying area.

The preventative maintenance benefits of the VTR system makes it well worth the investment and will pay for itself in reducing regularly scheduled maintenance.

**VTR parts kit  
(includes canister)**
