

US-2000 ASX

The fully automatic Transit ASX is specifically designed for banding high-gloss color graphic corrugated materials. A large product opening and long rolls of material make this machine ideal for corrugated applications. The special FWG 210-30-1300 banding material will not damage the edges of the top and bottom of the stack, yet will tightly hold the bundle for transport. This system is used in-line as part of the packaging procedure to hold counts and to prevent scuffing.
