

US-2000 LBM-LBMMS

US-2000 LBM

The US-2000 LBM uses a single push fence to automatically band a row of product. The operator selects the number of stacks and bands per stack. The stacks are automatically inserted into the bander and neatly banded with single or multiple bands.

US-2000 LBMMS

The US-2000 LBMMS for multiple stacks allows entire layers to be inserted. Using touch screen controls, the operator selects the number of stacks and bands per stack. Centering, separating, and feeding of each stack is done automatically with this system. The LBMMS uses two fences to separate and band each stack with single or multiple bands.
