

- Automatically stacks and bands
- Reduces packaging labor
- Great for club packs
- Easy changeover
- Ultrasonic welding technology
- Up to 24 stacks per minute

## US-2000 PIC-STA

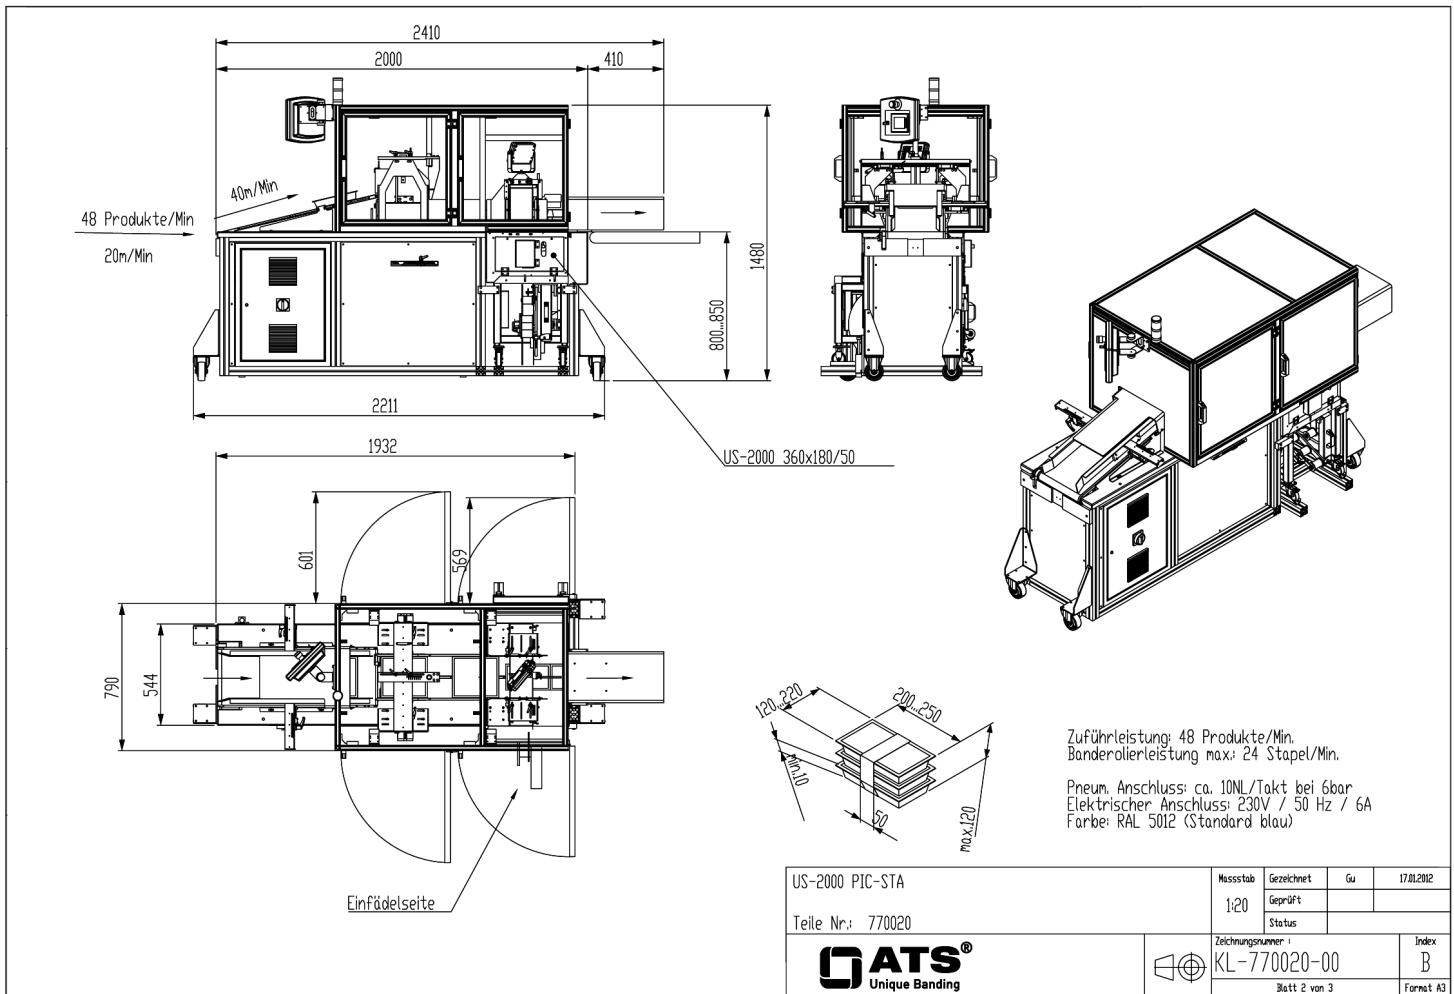

The US-2000 PIC-STA automatically receives product from your packaging line (1) and down stacks (2) them into programmable stack counts. The pin (lug) conveyor (3) then moves the stack into the banding unit (4) where the band is applied and sealed using Ultrasonic technology.

The downstacking unit includes an intermediate step allowing product to freely enter the machine without interfering with the pin conveyor or the bander as they cycle.

The compact footprint of the system is ideal for inline operation. It allows the integration of different US-2000 banding machines with 30, 50, or 60 mm band widths.
