

## AUTOMATED STRETCH FILM BANDING

The Felins Flex Strap XLA-24 automated stretch film bundling system provides cost saving benefits through increasing production while reducing labor.

The XLA-24 uses PLC logic with a touch screen operator interface and a automatic product clamping system to automatically control the complete bundling process.

This system comes complete with 2 slider bed rough top belt conveyors (infeed & exit), adjustable infeed product guides, remote e-stop/start controls and auto start infeed sensor. These components are fully integrated and controlled by the XLA-24 stretch film bander with pneumatic product clamping and a touch screen operator interface which control the number of wraps per band and the distance between bands.
