

STRAPACK POLYPROPYLENE STRAPPING

Strapack Polypropylene Strapping

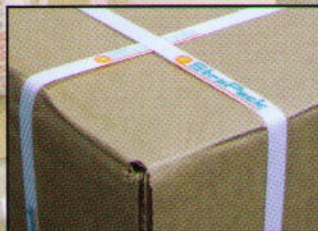

For 40 years, StraPack has been recognized as a world leader in the manufacture of high quality plastic strapping machines. More than a third of a million strapping machines have been sold throughout the world.

In 1994 Strapack built a plant in Danville, Illinois to manufacture polypropylene strapping. Although StraPack strapping machines are designed to run most strapping available throughout the world, the strapping made in the Illinois plant is manufactured to provide the best possible performance of StraPack strapping machines. The combination of StraPack equipment and strapping provides reliable strapping operation and minimizes both preventative and long-term maintenance requirements of the machines.

Strapack proudly offers "Quality" and "Value" with our product line of polypropylene strapping. Through our rigid quality control process, we assure our strapping runs flawlessly in StraPack and any other equipment, so that our customers maintain efficient operations without downtime. Also we assure that our strapping is reasonably priced for the quality of the products.

CUSTOM PRINTED STRAPPING

StraPack also offers high quality printed strapping. This is a quality of printing not available from any other strapping company in the North America. Please feel free to contact us for samples.
